Maryam, sorry I've been out of the office and haven't been back to check my calendar. I know 8:30 won't work. Penny

Penny and Jean:

I did not hear back confirming our call, but DTSC and EPA will be available to discuss the sampling proposal if it works out on your end. The call-in number for Monday's 8:30 AM call is Ex. 6 Personal Privacy (PP) and the passcode will be Ex. 6 Personal Privacy (PP). Thank you.

Thanks!

Maryam

Subject: Riverside Ag Park - Follow Up Call on Monday at 8:30 AM

Good Morning Penny!

It looks like 8:30 AM on Monday morning will work for us. Attached is our updated proposal, along with some details outlined below. Please confirm that this time works on your end, and I will send out a call-in number. Thank you.

Soil Sampling

1. 250 foot grid samples (n=39);
2. 39 soil samples will be collected from a depth of approximately 0-3 inches below ground surface;
3. At 5 locations, soil samples will be also collected from depths of approximately 2 feet, 5 feet and 8 feet below ground surface;
4. All samples will be analyzed for PCBs;

5. 10% of the samples collected will be analyzed for metals and dioxins/furans (the only other chemicals of concern identified during the Remedial Investigation); and,
6. Laboratory will be instructed to ensure that the method detection limits are set at or below 0.23 mg/kg.

Groundwater Sampling

1. Two new groundwater monitoring wells will be installed in the vicinity of the former groundwater monitoring wells MW-6 and MW-7 which exhibited the historically highest PCB results;
2. Groundwater samples will be collected for one year at three month intervals;
3. During the first sampling event, groundwater samples will be analyzed for PCBs, metals, perchlorate and dioxins/furans;
4. If metals, perchlorate and dioxins/furans are not detected or detected significantly below the MCLs in the first sampling event, analysis will not be continued for these analytes in the subsequent sampling events;
5. Additional sampling may be warranted, based on concentrations of PCBs detected in groundwater; and,
6. Laboratory will be instructed to ensure that the method detection limits are set at the lowest level achievable by the EPA Method 8082.

Off-site Sampling

1. DTSC and EPA will collaborate on plan and set up a call/meeting with CCAEJ to discuss a proposal.
